

"Very informative good introduction to concepts I can apply in the line of work I am in. Very good at relating info to relative situations." - Former Attendee

TOOLS FOR OPERATIONAL EXCELLENCE Lean Fundamentals

Session 1: March 16 Session 3: April 13 Time:
Session 2: March 30 Session 4: April 27 12:00pm - 4:30pm

COURSE OFFERINGS

Principles of Lean Enterprise

This half-day class introduces employees to principles underlying the Lean Enterprise with emphasis on differentiating between value add and non-value add activities, as well as the identification and elimination of waste in a value stream.

Tools of Lean: A Deeper Dive

This course focuses on some of the more predominantly used tools for smaller manufacturers in a variety of environments (high/low mix, high/low volume).

Lean Start-Up

This session will assist your company in identifying the greatest opportunities while avoiding the pitfall of sub-optimization of one area, process or department. Participants will learn to create both 'current state' and 'future state' value stream maps through hands-on experience and identification of improvement projects.

Lean Culture

Topics covered in this session include: Human performance management, effective leadership behaviors, creating and sustaining a culture of innovation, continuous improvement, and sustaining high performance.

PROGRAM DESIGN

1. Active Learning Sessions: We will conduct 4 half-day classroom sessions and provide lunch.
2. On-Site Company Check-Ins: After the 2nd and 4th sessions, companies with 3 or more registrants will receive an on-site visit from an OMEP consultant for lean implementation guidance.

INSTRUCTOR:

Gary Conner has over 25 years of manufacturing experience with 15 years dedicated to implementing lean manufacturing in companies of all sizes, from mom-and-pop shops with 10 workers to multi national corporations with 15,000 or more employees.
